- Massachusetts General Hospital

Massachusetts General Hospital

The MGH Orthopedic Service performs a high volume of both primary and repeat or revision hip and knee replacements. The service also was among the first in the state to perform the minimally invasive approach for hip replacements. We applaud the state for showing primary and revision statistics separately. We would advise that patients talk with their orthopedist to learn more about his or her level of competence in complicated cases, revision cases, and minimally invasive procedures. MGH has expertise in all of these types of situations and care for a large number of cancer patients who require complex hip replacement as part of their treatment.
